

## Data Compilation

On daily basis we closely monitor our animals, checking health, growth and physical numbers. For the fish we mainly feed and check if any is dead and periodically catch one to check growth and weight.

Computing of all data on daily basis

*The agric department is sorely responsible for food security at the institution, equipping and educating learner with adequate knowledge in Farming. We have of recent stated go deep into educating learners that agriculture is not just a job but a full time business, that one can embark and succeed in life.*

*We are also partnering with the locals to even educate them on some projects, as part of our community empowerment*

Head of Department

## Our ongoing Projects

**Crop farming**  
-Vegetables  
-Field Crops

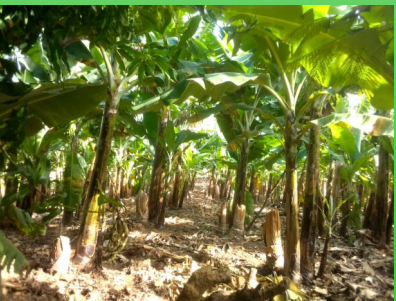

Covo

Green mealies

Bananas

## Animal Farming

-Fish  
-Poultry  
-Rabbitry  
-Goat

Why we chose these projects is that they use small land but with high results, thereby enhancing maximum land utilisation.  
We also make sure that all projects are learner inclusive meaning students are the ones actively running these..  
So resultantly we are equipping the next generation and empowering the nation.

## Activities Done in the Lab

-Seed analysis  
-Soil analysis  
-Disease and pest analysis  
-Crop yield analysis  
-Quality analysis

Birth of every project, we check in the lab, for all experiments and quality checks

## Future Projects in the pipeline

-Piggery  
-Cattle Farming  
-Fodder crop  
-Sheep  
-Dairy farming

We have decided to have these projects so as to include animal science at A Level. Also we have discovered that Marange region is a region 5 in farming, so animals are the best farming strategy. Also Holy Ghost is a boarding institution with about 1000 learners so we will be reducing costs on.
